

JLG Forklift Part

JLG Forklift Part - After retiring in the late 1960's, John L. Grove started on a cross country RV voyage. After spending numerous years establishing his family built crane company with his brother, John had no idea that this journey would give birth to the rise of JLG Industries, Inc. The world leader of mobile aerial work platforms and precision materials handling equipment was the end consequence of a road trip.

During their journey, John reacquainted himself with former business associates along the way. In combination with these conversations and a significant event; two workers were tragically electrocuted on scaffolding when the Groves were passing through the Hoover Dam. John uncovered a considerable marketplace for a product that could promptly and securely lift people in the air to accomplish maintenance and other building services.

Upon returning from their travels, John formed a partnership with two friends and obtained a metal fabrication company in McConnellsburg, Pennsylvania. In 1970, starting operations with a crew of twenty employees, they designed and sold the first JLG aerial work platform. The company incorporates many of the basic design essentials of that original lift into current models.

JLG forklifts have come a ways from the time when Mr. John L. Grove returned to town from his cross-country road trip and since the initial aerial work platform debuted on the market. These days, the business proudly continues to expand itself into many markets globally and develops new products to ensure clients are capable of being more effective and perform in the workplace within a safer environment.
